Race Targets

Half Oceanman
Oct 03, 2026
In 21 days
Target: 2:05:00
Predicted: ~2:20:09

Treviso 10K Tiramisu Run
Oct 11, 2026
In 29 days
Target: 57:30

Marathon
Feb 07, 2027
In 148 days
Target: 4:02:39

Ironman Italy Cervia
Jun 20, 2027
In 281 days
Target: 11:43:58
Predicted: ~10:54:05

AI Coaching

Training volume over the last 4 weeks has been low and inconsistent, with chronically short sleep (many nights under 5–6 hours) dragging body battery well below optimal recovery levels for extended periods. Swim fitness is the primary limiter heading into the Half Oceanman 5,000m in 21 days, with only three open-water sessions logged and no pool work evident in the data. Cycling has shown reasonable aerobic effort on the longer rides (66km and 36km), but power output on the indoor sessions is modest, suggesting the bike is currently the strongest of the three disciplines relative to current form.

- Sleep is the single biggest lever available right now — body battery has been below 40 on most days and sleep duration is averaging under 6 hours; prioritise 7–8 hours nightly for the next 3 weeks to arrive at the Half Oceanman as recovered as possible.
- With the Half Oceanman 5,000m swim in 21 days, pool sessions this week and next (Wk13/Wk14) are non-negotiable — focus on continuous aerobic blocks at ≤2:30/100m to build confidence at race distance, not short drill-heavy sets.
- Cap the Wk13 long ride at 60km easy (as already AI-adjusted) and the Wk13 long run at 10–12km easy — the priority is arriving at the swim race fresh, not accumulating training stress that won't convert to fitness in 3 weeks.
- The Wk14 threshold cycling intervals (5×5min @ 210–244W on 24 Sep) are 8 days before the Half Oceanman and should be replaced with an easy endurance spin — hard cycling at this point adds fatigue without meaningful adaptation benefit for the swim race.
- Post Half Oceanman (4 Oct onwards), the Wk16 long run and interval sessions are well-timed for the Treviso 10K on 10 Oct — keep the shakeout structure already planned and trust the taper; don't add extra volume after the swim race.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-09-13	Running	Easy 10km run @ 6:45–7:00/km, cap at 70 min — flat, conversational effort, HR ≤135 bpm	DECREASE
2026-09-18	Swimming	2,000m pool session: 400m warm-up drills, then 3×500m continuous @ 2:30/100m with 60s rest	REPLACE
2026-09-24	Cycling	Easy endurance spin 45–50 min @ 120–145W (Z2), flat, HR ≤135 bpm — no intensity whatsoever	REPLACE
2026-09-26	Cycling	70km @ 128–150W (Z2 low), cap at 150 min — controlled effort, no tempo blocks	DECREASE
2026-09-27	Running	Easy 8km @ 6:50–7:10/km, cap at 55 min, flat route, HR ≤130 bpm — legs-feel check only	DECREASE
2026-10-04	Running	Easy recovery run 6–8km @ 7:00–7:15/km, cap at 50 min, flat and HR ≤125 bpm — post Half Oc	DECREASE
