AI Coaching

- The last 4 weeks have been severely disrupted by illness starting around 2 August, with almost no structured training completed since 25 July and body battery readings consistently in the critically low range (0–31) for most of late July through early August. Sleep has been fragmented and insufficient across multiple nights, and as of 15 August the athlete reports still being sick but intending a slow return from the week of 17 August. With the Half Oceanman swim (5,000m) just 49 days away, the priority must be a careful, symptom-guided return to training this week before rebuilding swim volume specifically, as the 5km open-water distance is the most demanding near-term target.
- Treat the week of 17 August as a true return-to-training week: all sessions should be effort-capped at conversational pace and HR ≤135 bpm, with permission to cut any session short if symptoms return — do not attempt any planned distances or power targets from the original Week 9 plan.
 - Swim volume must become the highest-priority discipline for the next 7 weeks given the Half Oceanman requires 5,000m at 2:30/100m; aim to include at least two pool or open-water sessions per week and progressively extend the longest swim set from ~2,000m now toward 4,000m+ by mid-September.
 - Body battery has been critically depleted (readings of 0–11 on multiple days) — prioritise sleep above all training targets this week; if body battery is below 40 on any given morning, replace that day's session with full rest rather than a 'light' alternative.
 - The week abroad (24–30 August) coincides with Week 10 — confirm bike access in advance; if no bike is available, substitute the long ride with an extended open-water swim session, which directly serves the Half Oceanman build and requires no equipment.
 - The Treviso 10K (57 days) falls close behind the Half Oceanman, so running fitness will naturally benefit from the aerobic base being rebuilt — do not add run-specific intensity (tempo or intervals) until at least two consecutive weeks of easy running show stable HR and no symptoms.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-08-16	Running	20–25 min flat walk only (no jogging) at fully conversational effort; HR target ≤120 bpm.	DECREASE
2026-08-18	Cycling	Shorten to 30–40 min easy spin indoors at 100–120W (well below Z2 floor); HR cap 130 bpm.	DECREASE
2026-08-22	Cycling	Cap at 45 min at 100–120W with strict HR ≤130 bpm; if the Tuesday bike session went well a	DECREASE
2026-08-23	Running	Replace with 35–45 min easy jog at 6:45–7:15/km (HR ≤135 bpm); stop early if HR drifts abo	REPLACE
2026-08-28	Swimming	Retain as the week's key swim session but adjust to 60 min with a structured aerobic set (	DECREASE
2026-08-29	Cycling	If no bike is available abroad, replace entirely with a 60 min open-water swim (2,000–2,50	REPLACE
