Race Targets

Treviso 10K Tiramisu Run
Oct 03, 2026
In 63 days
Target: 57:30
Predicted: ~1:01:53

Half Oceanman
Oct 03, 2026
In 63 days
Target: 2:05:00
Predicted: ~2:12:20

Marathon
Feb 07, 2027
In 190 days
Target: 4:02:39
Predicted: ~4:21:08

Ironman Italy Cervia
Jun 20, 2027
In 323 days
Target: 11:43:58
Predicted: ~16:59:27

AI Coaching

The last 4 weeks show a heavily disrupted training block with critically poor sleep — multiple nights under 5 hours, two nights under 1 hour, and body battery repeatedly bottoming out below 30 — creating a significant accumulated fatigue deficit that overshadows any fitness gains. Training volume has been low and inconsistent across all three disciplines, with no cycling sessions before July 20, minimal swimming, and only three runs of which one was a high-HR effort (179 bpm on July 18) that is a red flag given the underlying fatigue. With the Treviso 10K and Half Oceanman both 63 days away, the immediate priority must be stabilising sleep and rebuilding an aerobic base cautiously before adding any race-specific intensity.

- Sleep is the single biggest limiter right now — prioritise 7+ hours nightly above all training targets; the body battery data shows you are not absorbing training stress, so more sleep will yield more fitness gains than any additional session.
- For the Treviso 10K (63 days), begin introducing controlled race-pace intervals only once body battery consistently reaches 50+ on waking — the Aug 20 and Aug 25 interval sessions in the plan are appropriately timed but must be gated on recovery, not the calendar.
- For the Half Oceanman 5000m swim (63 days), your current open-water sessions are too short (max 2km) and pool work needs to build to 3000–4000m continuous swims in the next 4–5 weeks; prioritise the Tuesday and Friday pool sessions as non-negotiable anchor sessions.
- Avoid any run above Z2 (HR >150 bpm) until at least two consecutive weeks of 6.5h+ average nightly sleep — the July 18 run at 179 bpm average suggests you are digging a deeper recovery hole rather than building fitness.
- The planned Aug 8 long ride (84–88km) and Aug 9 long run back-to-back is appropriate only if the preceding week's sleep gates are met; if not, drop the Sunday long run to a 30-min easy walk-run rather than attempting 12km on residual fatigue.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-08-04	Cycling	Replace entirely with 30–40 min Z1 spin at 100–127W (below Z2 floor) if body battery ≥45,	DECREASE
2026-08-09	Running	Cap at 8km @ 7:00–7:15/km (55–60 min) walk-run with HR strictly ≤140 bpm regardless of how	DECREASE
2026-08-11	Running	30–35 min easy run at 6:45–7:00/km with HR ≤145 bpm; include 4 × 20-second strides at ~5:4	REPLACE
2026-08-20	Running	Keep structure but reduce to 3 × 1km @ 5:45/km with 2-min walk recovery; add a strict HR c	DECREASE
2026-08-21	Swimming	Build to 3000m total: 400m warm-up, 10 × 200m @ 2:25/100m with 20-sec rest, 200m cool-down	INCREASE
2026-08-28	Swimming	Build to 3500m total: 400m warm-up, 3 × 1000m @ 2:25–2:30/100m with 60-sec rest between se	INCREASE
