Race Targets

Half Oceanman
Oct 03, 2026
In 7 days
Target: 2:05:00
Predicted: ~2:27:55

Treviso 10K Tiramisu Run
Oct 11, 2026
In 15 days
Target: 57:30
Predicted: ~1:02:32

Marathon
Feb 07, 2027
In 134 days
Target: 4:02:39
Predicted: ~4:23:55

Ironman Italy Cervia
Jun 20, 2027
In 267 days
Target: 11:43:58
Predicted: ~15:55:06

AI Coaching

- Over the last 4 weeks you have logged solid cycling volume (4–5 rides/week, including long efforts of 60–67 km) and three open-water swims of up to 2 km, but running is virtually absent — just one 10 km run at a very high HR (169 bpm), which signals poor running fitness relative to your upcoming Treviso 10K. Sleep is chronically short (most nights 3.5–6.5 hrs, well below the 7–9 hr optimal) and body battery has repeatedly bottomed out near zero, indicating accumulated fatigue that must be respected this week before two races in quick succession. The Half Oceanman 5,000 m swim is only 7 days away and should be the immediate priority, with the Treviso 10K 8 days later demanding a careful balance between race-day freshness and minimal running stimulation.
- Prioritise sleep above all other recovery interventions this week — target 7.5+ hours every night before the Half Oceanman; with body battery repeatedly at 0–2, no session is worth cutting sleep short for.
 - Your only run in 4 weeks was at 169 bpm average, indicating running is your weakest and most stressful discipline right now — for the Treviso 10K, aim for a conservative 6:00–6:15/km race pace rather than the planned 5:45/km to avoid blowing up.
 - Continue Z2 cycling to maintain your strongest discipline's aerobic base, but cap all rides this week at 90 minutes maximum and avoid any tempo or Z3 blocks until after both races.
 - For the Half Oceanman swim, do one short confidence-builder open-water or pool session mid-week (20–25 min, easy pace, no hard sets) to stay loose, then full rest the day before the race — your swim fitness is clearly your strongest asset.
 - After both races are done (from Oct 13), reintroduce running gradually with 2–3 easy runs per week before attempting the planned interval sessions — jumping straight into 6×800 m intervals in Wk16/17 with only one run in the past month is a significant injury risk.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-09-26	Cycling	Skip entirely — full rest day. Body battery recorded at 0–2 this morning and you have two	SKIP
2026-09-27	Running	15-min very easy walk/jog at 8:00+/km on flat ground, HR ≤120 bpm — purely to shake out le	DECREASE
2026-09-29	Cycling	Reduce to 30–40 min easy spin at 100–128 W (low Z1/Z2 border), keeping HR firmly below 130	DECREASE
2026-10-06	Running	Replace with an easy aerobic run of 35–40 min @ 6:30–7:00/km, HR ≤140 bpm, flat route — no	REPLACE
2026-10-15	Running	Reduce to 4×600 m @ 5:20–5:30/km with 90 sec jog recovery, total ~35 min including warm-up	DECREASE
2026-10-18	Running	Cap the long run at 12–13 km @ 6:30–7:00/km (approximately 80–90 min), keeping HR below 14	DECREASE
