🤖 AI Coaching

> The last 4 weeks show a fragmented, low-volume training block with only 9 sessions logged — notably absent are pool swims and structured run sessions, which is concerning given the Marathon is just 120 days away. Sleep is chronically insufficient, with many nights under 4 hours and body battery readings frequently in the low single digits, indicating significant accumulated fatigue that will blunt adaptation. The nearest priority must be the Marathon: running volume and consistency are dangerously low relative to a sub-4h goal, and the upcoming weeks need to build steady aerobic run base immediately.

- Sleep is your biggest limiter right now — multiple nights of under 3.5 hours and body battery readings of 0–7 are unsustainable; prioritise 7–8 hours consistently this week before adding any training load.
- Running consistency is critically low (only one run logged in 4 weeks at a high HR of 169 bpm for 10 km) — with the Marathon 120 days away, begin building an easy aerobic run base immediately at 6:30–7:00/km, targeting at least 3 runs per week.
- The 5K Open Water Swim on Oct 25 is well-served by your recent swim sessions (5.2 km open water on Oct 3), but avoid high-intensity cycling the day before — keep Oct 24 ride at the lower end of Z2 and shorten if fatigue is high.
- On Oct 15, the planned 6×800 m intervals are premature given you've had only one run in 4 weeks at already-high HR — replace with a continuous easy aerobic run to rebuild run fitness safely before reintroducing intensity.
- Pool swimming has been completely absent despite two open water sessions — add at least two pool swims per week going forward to improve technique and pacing control ahead of the OWS race on Oct 25.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-10-13	**Running**	30 min easy jog at 7:00–7:30/km as a standalone morning session; remove the evening cyclin	REPLACE
2026-10-15	**Running**	Continuous easy aerobic run 40–45 min at 6:30–7:00/km — no intervals; focus on rebuilding	REPLACE
2026-10-18	**Running**	Easy long run 10–12 km at 6:45–7:15/km (~75–85 min) — further reduced given near-zero run	DECREASE
2026-10-24	**Cycling**	40 km easy spin @ 128–150W (lower Z2 only), 90–100 min maximum — no tempo blocks; race-eve	DECREASE
