Race Targets

Half Oceanman
Oct 03, 2026
RACE DAY!
Target: 2:05:00
Predicted: ~2:29:55

Treviso 10K Tiramisu Run
Oct 11, 2026
In 8 days
Target: 57:30
Predicted: ~1:02:32

Marathon
Feb 07, 2027
In 127 days
Target: 4:02:39
Predicted: ~4:23:55

Ironman Italy Cervia
Jun 20, 2027
In 260 days
Target: 11:43:58
Predicted: ~16:32:56

AI Coaching

- Over the last 4 weeks training volume has been moderate but inconsistent, with notable gaps in running (only one run recorded) and swimming while cycling has dominated. Sleep is chronically short — most nights sitting at 3–4 hours rather than the recommended 7–8 — and body battery scores are persistently low, signalling accumulated fatigue that needs addressing before the Half Oceanman today and the Treviso 10K in 8 days. The single run on 25 Sep showed a very high HR of 169 bpm at a modest 6:15/km pace, suggesting running-specific fitness needs careful rebuilding rather than aggressive interval work in the near term.
- Today is race day for the Half Oceanman 5,000 m swim — focus entirely on warm-up, race execution, and post-race fuelling; avoid any additional training load whatsoever.
 - With the Treviso 10K only 8 days away, treat the next 8 days as a mini-taper: keep all sessions short and easy, avoid high-intensity intervals (especially the Wk16 6×800 m session on Oct 6), and prioritise sleep above 7 hours per night to allow body battery to recover from its chronically low state.
 - Chronic sleep deprivation (averaging ~5.5 hrs/night across 4 weeks) is the single biggest limiter visible in your data — address this immediately by targeting a minimum 7 hours; without this, no training prescription will yield the intended adaptation.
 - Running fitness appears underdeveloped relative to the 5:45/km Treviso target — your only run in 4 weeks was at 169 bpm average for 6:15/km, so arrive at the 10K start line fresh rather than chasing fitness with hard sessions this week.
 - From Wk17 onwards (post-Treviso), prioritise re-introducing structured running at 2–3 sessions per week with one quality session and one long run, as the marathon and Ironman run targets require a sustained build that is currently absent from recent training.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-10-06	Running	Replace with 30–35 min very easy jog at 6:45–7:15/km — no intervals; this is race-week pre	REPLACE
2026-10-06	Swimming	Shorten to 1,200–1,500 m easy technique-focused swim at comfortable effort — no hard sets;	DECREASE
2026-10-08	Strength Training	Reduce to 20–25 min very light activation only: bodyweight single-leg calf raises, hip mob	DECREASE
2026-10-08	Cycling	Skip entirely — no cycling session 2 days before Treviso 10K; legs need to be fully fresh.	SKIP
2026-10-15	Running	Replace with 4×800 m at 5:00–5:15/km with 90-sec jog recovery, total ~45 min — reduced vol	REPLACE
2026-10-18	Running	Cap at 12–13 km at 6:30–7:00/km (approx 80–90 min) — do not attempt the full planned dista	DECREASE
