Race Targets

Half Oceanman
Oct 03, 2026
In 63 days
Target: 2:05:00
Predicted: ~2:07:30

Treviso 10K Tiramisu Run
Oct 11, 2026
In 71 days
Target: 57:30
Predicted: ~1:01:53

Marathon
Feb 07, 2027
In 190 days
Target: 4:02:39
Predicted: ~4:21:08

Ironman Italy Cervia
Jun 20, 2027
In 323 days
Target: 11:43:58
Predicted: ~16:55:47

⚠️ Pre-Race Conflicts

DATE	DISCIPLINE	SESSION	DURATION	CONFLICT
2026-10-03	Cycling	Wk15 Long Ride	240min	0d before Half Oceanman
2026-10-11	Running	Wk16 Long Run	180min	0d before Treviso 10K Tiramisu Run

🤖 AI Coaching

The last 4 weeks show a deeply fatigued athlete: sleep is chronically short (multiple nights under 5 hours, including a 41-minute night on July 27), body battery has repeatedly bottomed out below 30, and training has been very sporadic with only 9 sessions logged — no cycling or swimming at all in the final two weeks. The one positive signal is the July 20 long ride (77km) and improving swim distances in early July, but these gains are being eroded by the ongoing recovery deficit. With the Half Oceanman 5,000m swim 63 days away as the priority race, rebuilding sleep and aerobic base — particularly swim volume — must take precedence over any intensity.

- Sleep is the single biggest limiter right now: target a minimum 7 hours nightly for the next 10 days before resuming any structured training, as no fitness adaptation is possible on the current sleep debt.
- The Half Oceanman 5,000m swim in 63 days is the priority — once sleep stabilises, ramp pool/open-water swim volume progressively from ~1,500m to 4,000m+ per session over the next 8 weeks, keeping pace at or under 2:30/100m.
- Avoid any running faster than 6:30/km until body battery consistently wakes above 50 — the July 18 run at HR 179bpm and 5:02/km pace was a red flag showing the body was already overreached.
- For the Treviso 10K (71 days away), incorporate 4–5 x 1km race-pace intervals (5:45/km) once per week from mid-August onward, but only after two consecutive weeks of solid sleep and aerobic base running.
- Given Malta's summer heat, schedule all key sessions (especially long rides and swims) before 8am or after 6pm to reduce cardiac drift and perceived effort — this will make the same workouts feel significantly easier.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):
