Race Targets

Half Oceanman
Oct 03, 2026
In 35 days
Target: 2:05:00
Predicted: ~2:13:20

Treviso 10K Tiramisu Run
Oct 11, 2026
In 43 days
Target: 57:30

Marathon
Feb 07, 2027
In 162 days
Target: 4:02:39

Ironman Italy Cervia
Jun 20, 2027
In 295 days
Target: 11:43:58
Predicted: ~1:41:20

AI Coaching

- The last 4 weeks show severely disrupted training — only one recorded session (a 9-minute open water swim on 22 Aug) against a backdrop of chronically poor sleep (most nights under 6 hours, many under 5) and consistently low body battery scores, compounded by a reported illness mid-August. With the Half Oceanman (5,000m swim) just 35 days away, swim-specific fitness is the critical gap and must become the immediate priority while overall load is rebuilt carefully given the depleted state.
- Prioritise swimming above all other disciplines for the next 3 weeks: target at least 3 swim sessions per week (2 pool + 1 open water) building toward 3,000–4,000m total weekly swim volume, as the Half Oceanman 5,000m swim in 35 days is the most urgent fitness gap.
 - Sleep must be treated as a training variable — aim for a minimum 7 hours per night consistently, as the persistent sub-5-hour nights and low body battery (frequently under 30) are almost certainly the root cause of the training breakdown and illness.
 - Do not attempt the planned 100km ride on 29 Aug at full distance — your body battery on 28–29 Aug sits at 55–60 (improving but still modest) after an illness block; a shortened 45–60 min easy spin at Z2 is appropriate to re-engage without digging a deeper fatigue hole.
 - Use the Sunday long run on 30 Aug as a fitness check rather than hitting the full 19km target — if pace drifts above 6:45/km or HR feels high, cut to 12–14km and treat this week as a return-to-training week, not a peak load week.
 - From week 11 onward, protect the two weekly pool swims as non-negotiable anchors — the Half Oceanman pace target of 2:30/100m is achievable but requires consistent pool work; skipping swims in favour of bike or run sessions will leave you under-prepared for the race's primary challenge.
- Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-08-29	Cycling	45-minute easy Z2 spin at 128–150W only — no distance target, focus on leg activation and	DECREASE
2026-08-29	Swimming	30–40 min easy open-water swim, 1,000–1,500m at fully comfortable effort (no pace target)	DECREASE
2026-08-30	Running	12–14km easy aerobic run @ 6:30–7:00/km — treat as a fitness check; stop early if HR trend	DECREASE
2026-09-05	Cycling	75–90km @ 128–160W (lower end of Z2 only), cap at 200 min — omit Z3 Tempo blocks this week	DECREASE
2026-09-06	Running	15–16km @ 6:30–6:45/km — steady aerobic effort, no negative split; use HR cap of 150bpm as	DECREASE
2026-09-19	Cycling	90km easy Z2 ride @ 128–165W, 180 min maximum — this is the final long ride before the Hal	REPLACE
