Race Targets

Half Oceanman
Oct 03, 2026
In 28 days
Target: 2:05:00
Predicted: ~2:18:38

Treviso 10K Tiramisu Run
Oct 11, 2026
In 36 days
Target: 57:30

Marathon
Feb 07, 2027
In 155 days
Target: 4:02:39

Ironman Italy Cervia
Jun 20, 2027
In 288 days
Target: 11:43:58
Predicted: ~8:34:52

AI Coaching

- Training volume over the last 4 weeks has been extremely low — just three sessions totalling roughly 100 minutes — against a backdrop of chronic sleep deprivation, with most nights averaging under 6 hours and body battery frequently in the 10–40 range. With the Half Oceanman 5,000m swim only 28 days away and an open-water swim base of just 2km completed recently, the swim discipline is the most urgent underprepared area. The upcoming plan has been sensibly adjusted in places, but some sessions still carry excessive volume or intensity given the athlete's current recovery status.
- Make sleep the top priority for the next 7–10 days — body battery has been near zero on multiple occasions and no amount of training will compensate for chronic under-recovery at this level; aim for a minimum 7 hours per night as a non-negotiable.
 - Swim frequency must increase immediately to 4 sessions per week through to race week: the Half Oceanman 5,000m swim is 28 days away and your current open-water base is only 2km, so pool continuity (not just volume) is critical to building confidence at race pace.
 - Keep this weekend's long ride (Sep 5) in the 60–70km range at low Z2 as already adjusted, but be prepared to cut it short if HR drifts above 140 bpm — a fatigued body in Malta's September heat will accumulate load faster than the numbers suggest.
 - The Wk12 long ride (Sep 12, 110km/240 min) and long run (Sep 13, 20km) are back-to-back big days only 20 days before the Half Oceanman — given the very low training base, consider capping the long ride at 80–90km and the long run at 14–15km to avoid arriving at race week already depleted.
 - In the final 7 days before the Half Oceanman (from Sep 26 onward), shift to full taper mode: one short pool swim with race-pace efforts, one easy 45-min spin, and complete rest 2 days before — do not attempt the planned 120km ride or 21km run in that window.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):
