🤖 AI Coaching

> The last 4 weeks show an inconsistent training block with very low volume overall — only 8 sessions logged, dominated by indoor cardio (likely yoga/pilates) and two open-water swims, with a single run and limited cycling. Sleep is severely compromised, with multiple nights under 4 hours and body battery frequently depleted, indicating accumulated fatigue that must be addressed before the 5K Open Water race on October 25. The nearest priority race (5K OW Swim, 8 days away) is reasonably supported by two recent open-water swims including a 5.2km effort on Oct 3, but run and bike volume is far below what the marathon and Ironman targets will eventually demand.

- Sleep is your biggest performance limiter right now — multiple nights of 3 hours or less and near-zero body battery readings suggest you are chronically under-recovered; prioritise 7–8 hours per night this week as non-negotiable race prep for October 25.
- Your Oct 3 open-water 5.2km at 136bpm avg is a solid confidence builder for the 5K race — do one short, race-pace open-water or pool session (1,500–2,000m) mid-week to stay sharp without accumulating fatigue before Oct 25.
- Run mileage is critically low for a sub-4h marathon in 113 days — after the 5K swim race, build a consistent run frequency of 3 sessions per week immediately, keeping easy runs at 6:30–7:00/km to establish the aerobic base before introducing pace work.
- The Oct 17 long ride (80km, 240 min) falls the day before the AI-adjusted long run and only 8 days before a race — keep the ride but cap it at 60–70km and strictly hold Z2 watts (128–177W) with no tempo blocks this week to protect freshness for Oct 25.
- Power data on the Sep 25 run shows 333W with avg HR 169 and pace only 6:15/km — this disproportionately high effort-to-pace ratio suggests either significant fatigue or elevated stress on that day; monitor run HR trends closely and avoid repeating high-HR efforts at slow paces, as this pattern can signal overreach.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-10-17	**Cycling**	Reduce to 65km @ 128–177W (Z2 only, no tempo blocks), ~195 min — flat terrain to keep HR c	DECREASE
2026-10-18	**Running**	Cap at 10–11km @ 6:45–7:00/km, ~70–75 min — fully flat, stop if HR exceeds 160bpm	DECREASE
2026-10-20	**Running**	Replace with an easy 25–30 min jog @ 6:45–7:15/km plus 4x20-sec strides — no interval effo	REPLACE
