Race Targets

Half Oceanman
Oct 03, 2026
In 28 days
Target: 2:05:00
Predicted: ~2:20:09

Treviso 10K Tiramisu Run
Oct 11, 2026
In 36 days
Target: 57:30

Marathon
Feb 07, 2027
In 155 days
Target: 4:02:39

Ironman Italy Cervia
Jun 20, 2027
In 288 days
Target: 11:43:58
Predicted: ~8:36:01

AI Coaching

- Training volume over the last 4 weeks has been extremely low — just 4 sessions totalling roughly 158 minutes of meaningful work — with no cycling or running recorded and swim volume far below what is needed for a 5,000m open-water race in 28 days. Wellness data paints a concerning picture: sleep is chronically short (often 3–5 hours, frequently below 4), body battery is regularly in the 10–40 range, and there are multiple near-zero days, indicating the body is carrying significant accumulated fatigue. The priority right now must be sleep and recovery first, then a careful, progressive ramp in swim volume over the next 3–4 weeks to give the Half Oceanman the best possible preparation.
- Sleep is the single biggest limiter right now — body battery is consistently below 40 and sleep duration averages under 5.5 hours; target a minimum of 7 hours per night this week before adding any training stress.
 - Swim volume is critically low for a 5,000m race in 28 days: prioritise getting in the water 3 times per week immediately, building toward a 2,500–3,000m continuous or near-continuous session by race week at ≤2:30/100m.
 - Treat the Wk12 long ride (110km, 240 min on 12 Sep) as a firm cap of 90 min / 60km given the near-zero training base — the plan's AI-adjusted Wk13 long ride (60km, 120 min) is already well-calibrated for this phase.
 - The Wk12 long run on 13 Sep (20km, 180 min) is excessive given zero running has been recorded in 4 weeks — cap it at 10–12km easy to avoid injury ahead of both the Half Oceanman swim and the Treviso 10K.
 - In the final 7 days before the Half Oceanman (from 27 Sep), reduce all non-swim sessions to easy maintenance only and do one final open-water 2,000m dress-rehearsal swim on ~30 Sep to build confidence in race conditions.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-09-12	Cycling	60–70km @ 120–145W (low Z2), hard cap at 90 minutes — stop earlier if HR drifts or fatigue	DECREASE
2026-09-13	Running	10–12km @ 6:45–7:00/km easy aerobic, hard cap at 75 minutes — no pace pressure	DECREASE
2026-09-15	Cycling	40–50 min steady Z2 @ 128–160W — remove threshold intervals entirely this week	REPLACE
2026-09-24	Cycling	30–40 min very easy spin @ 110–130W (active recovery) — no intensity 9 days before Half Oc	DECREASE
2026-09-26	Cycling	45–60 min easy spin @ 120–140W, flat route — purely to keep legs moving, no distance targe	DECREASE
2026-09-27	Running	8–10km easy jog @ 7:00/km, cap at 60 min — final easy aerobic flush before race week	DECREASE
