Race Targets

Treviso 10K Tiramisu Run
Oct 03, 2026
In 64 days
Target: 57:30
Predicted: ~1:01:53

Half Oceanman
Oct 03, 2026
In 64 days
Target: 2:05:00
Predicted: ~2:12:20

Marathon
Feb 07, 2027
In 191 days
Target: 4:02:39
Predicted: ~4:21:08

Ironman Italy Cervia
Jun 20, 2027
In 324 days
Target: 11:43:58
Predicted: ~16:59:27

AI Coaching

The last 4 weeks show severely fragmented training with only 9 sessions logged, dominated by chronically poor sleep (multiple nights under 4 hours, body battery hitting 2-5 on several days) and a dangerous HR spike during the July 18 run (avg 179 bpm, load 208). Cycling volume is the brightest spot with a solid 77km ride on July 20, but swim and run consistency are well below what's needed for the Treviso 10K and Half Oceanman in 64 days. The most urgent priority is rebuilding sleep discipline and letting the body battery recover before layering any meaningful training stress.

- Target 7+ hours of sleep every night through August 7 as a non-negotiable prerequisite before reintroducing structured intensity — the repeated sub-5-hour nights are the single biggest limiter right now.
- For the Treviso 10K (64 days), introduce short race-pace efforts of 4×1km at 5:45/km starting only in Week 9 (Aug 20) once sleep gates are consistently met — do not attempt these while body battery remains below 50.
- Swimming needs to become the most consistent discipline given the Half Oceanman 5km target; aim for two pool sessions per week hitting 2km+ each from Week 7 onwards, prioritising stroke efficiency and aerobic volume over pace.
- Eliminate all high-intensity running (HR >160 bpm) until at least August 9; the July 18 run at 179 bpm average without adequate recovery is a clear injury and overtraining risk signal.
- Consider shifting the Week 7 long ride (Aug 8) start time to early morning Malta hours (before 08:00) to avoid peak summer heat, which compounds cardiovascular stress on an already fatigued system.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):
