AI Coaching

- The last 4 weeks show extremely limited training — only a single hiking session recorded — with persistently poor sleep (multiple nights under 5 hours, body battery frequently in single digits) and a self-reported illness as of 15 August. Recovery metrics are only beginning to stabilise in the last few days (Aug 16 showing the best sleep and body battery in weeks), suggesting the athlete is just emerging from a significant illness-driven disruption. With the Half Oceanman 5000m swim 42 days away, the priority is cautious re-entry into training, rebuilding aerobic base and swim volume without overloading a body that has been severely under-recovered.
- Treat this entire week (Aug 22–24) as a controlled re-entry: keep today's capped 60-min easy ride as planned, but skip the 180-min / 18.5km long run on Sunday — replace it with a 45–60 min very easy jog (HR ≤138 bpm) to avoid a large spike in load after weeks of near-zero training.
 - Swimming is your most urgent discipline for the Half Oceanman (5000m in 42 days) — prioritise the Tuesday and Friday pool sessions in Week 10 above all other training, as rebuilding feel for the water quickly is the single biggest fitness lever you have before race day.
 - Sleep is the most critical recovery tool right now — aim for a minimum 7 hours nightly before attempting any session above easy Zone 2, as your body battery data shows performance is tightly correlated with sleep quality across the last four weeks.
 - Hold off on any intensity (tempo runs, threshold cycling intervals) until at least the second week of September; your body needs 2–3 weeks of consistent easy aerobic work before adding load on top of a prolonged illness and detraining block.
 - For the Treviso 10K Tiramisu Run (50 days away, target 5:45/km), no extra session changes are needed beyond the existing plan — your tempo run sessions in Weeks 11–12 at 5:35–5:50/km will serve as natural race-pace rehearsals, so focus on arriving at those sessions healthy rather than adding volume.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):
