AI Coaching

Over the last 4 weeks, training has been fragmented and inconsistent across all three disciplines, with a clear underrepresentation of running (only one run recorded) and notably poor sleep — multiple nights under 4 hours and very low body battery readings suggest accumulated fatigue rather than adequate recovery. The Treviso 10K is tomorrow, so the priority now is arriving as fresh as possible given the limited run base and residual fatigue. Looking ahead, the 5K Open Water Swim on October 25 is the next significant event and swim volume is the one area showing some recent commitment, which is encouraging.

- For tomorrow's Treviso 10K, given only one run in 4 weeks (10km at 6:15/km with HR of 169), temper expectations slightly — target 5:45–5:50/km and let the first 3km feel easy before committing to pace, as your run fitness may not support a hard effort from the gun.
- Sleep is a critical limiter right now — multiple nights of under 3.5 hours and body battery readings near zero (Sep 27, Sep 30, Oct 3) indicate you are chronically under-recovered; prioritise getting 7–8 hours in the nights leading to and following the race.
- After the race, resist the urge to resume full training load immediately — take at least 2–3 days of genuinely easy or rest-only activity before reintroducing any intensity, particularly the Thursday intervals planned for Oct 15.
- With the 5K Open Water Swim on October 25, continue prioritising pool sessions on Oct 13 and Oct 16 but focus on pacing and efficiency rather than volume, targeting 2:20–2:25/100m to build race-specific rhythm.
- Running volume needs urgent rebuilding after the Ironman block — the single 10km run in 4 weeks is too sparse for the marathon target at 5:45/km; from week 17 onwards, aim for at least 3 runs per week even if two of them are short easy efforts of 30–40 minutes.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-10-10	Rest	Race day as planned — keep warm-up to 10 min easy jog plus 3–4 strides only; target 5:45–5	DECREASE
2026-10-13	Running	Drop the AI-added run session entirely on Oct 13 — keep the pool swim (2km, technique focu	SKIP
2026-10-15	Running	Replace with a steady aerobic run of 35–40 min at 6:30–7:00/km — no intervals this session	REPLACE
2026-10-18	Running	Cap at 10–11 km at 6:45–7:00/km (~70–75 min) — build conservatively back to long-run dista	DECREASE
2026-10-24	Cycling	Shorten to 50–55 km @ 128–160W (lower Z2), approximately 180–200 min — the day before the	DECREASE
2026-10-25	Swimming	Race as planned — arrive 45 min early, do a 400–600m warm-up swim if conditions allow, see	REPLACE
