## Race Targets

**Half Oceanman**  
Oct 03, 2026  
**In 58 days**  
Target: 2:05:00  
Predicted: ~2:07:30

**Treviso 10K Tiramisu Run**  
Oct 11, 2026  
**In 66 days**  
Target: 57:30  
Predicted: ~56:39

**Marathon**  
Feb 07, 2027  
**In 185 days**  
Target: 4:02:39  
Predicted: ~3:59:04

**Ironman Italy Cervia**  
Jun 20, 2027  
**In 318 days**  
Target: 11:43:58  
Predicted: ~16:33:43

## Last 30 Days

**7**  
SESSIONS

**10h**  
VOLUME

**110**  
AVG LOAD

**6.1h**  
AVG SLEEP

**48**  
BODY BATTERY

**Swimming (2)**  
**3.1km** TOTAL  
**2:33/100m** PACE

**Running (3)**  
**16km** TOTAL  
**6:11/km** PACE

**Cycling (1)**  
**77km** TOTAL  
**16.4 km/h** SPEED

## AI Coaching

The last 4 weeks show a significant training disruption: a productive mid-July block (swimming, a hard run on 18 July at very high HR 179bpm, and a long 4.5-hour ride) was followed by a complete stop from 2 August due to illness, with the doctor mandating no sport until at least 11 August. Wellness data confirms the severity — body battery has been critically low (0–11) from 30 July through 4 August, and sleep has been severely fragmented, indicating the body is still fighting the illness. The return-to-training on 11 August must be genuinely cautious, as the Half Oceanman (58 days away, 5,000m swim) is the priority target and premature loading risks relapse and a far worse outcome.

- Treat 11–14 August as a test week, not a training week: if HR is elevated above normal at easy effort or fatigue persists, drop all sessions to walking and light mobility — the Half Oceanman is 8 weeks away and no fitness can be built in week 1 back from illness anyway.
- Prioritise swim volume above all other disciplines from week 8 onward — the Half Oceanman 5,000m swim is the nearest race and the discipline most likely to be under-prepared; aim for 3 pool sessions per week as soon as health allows.
- The 18 July run at 179 bpm average HR (training load 208) was a red flag even before illness — avoid any high-intensity running until you have at least 2 weeks of consistent easy sessions completed post-illness, particularly given the Treviso 10K is only 1 week after Half Oceanman.
- During the week abroad (24–30 August) flag that the 100km long ride on 29 August and any gym sessions will need bike access and gym access respectively — have a bodyweight strength and hotel pool or open-water swim alternative ready as a fallback.
- Monitor body battery daily on return to training: if it does not recover above 50 within 3 days of resuming easy sessions, take another full rest day before attempting any structured work — this metric was tracking your illness deterioration accurately from late July.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

| DATE       | DISCIPLINE | PROPOSED                                                                                   | TYPE     |
|------------|------------|--------------------------------------------------------------------------------------------|----------|
| 2026-08-11 | Swimming   | Easy 30-min pool session, 1,000–1,200m only at comfortable effort (no pace target) — techn | DECREASE |
| 2026-08-13 | Cycling    | Replace with an easy 45-min Z2 spin at 120–150W (well below the 128–177W Z2 floor) — no te | DECREASE |
| 2026-08-15 | Cycling    | Reduce to 90–105 min, 35–40km at 120–150W (steady aerobic, no targets) — cut the session s | DECREASE |
| 2026-08-16 | Running    | Keep the swim as planned (this is already well-adjusted for illness return) but cap at 1,5 | DECREASE |
| 2026-08-29 | Cycling    | Complete the 100km ride as planned if abroad logistics allow bike access; if no bike is av | REPLACE  |

|            |                   |                                                                                                            |         |
|------------|-------------------|------------------------------------------------------------------------------------------------------------|---------|
| 2026-08-27 | Strength Training | <a href="#">Replace with 40-min bodyweight and resistance-band strength circuit: single-leg calf raise</a> | REPLACE |
