## Race Targets

**Half Oceanman**  
Oct 03, 2026  
**In 12 days**  
Target: 2:05:00  
Predicted: ~2:27:55

**Treviso 10K Tiramisu Run**  
Oct 11, 2026  
**In 20 days**  
Target: 57:30

**Marathon**  
Feb 07, 2027  
**In 139 days**  
Target: 4:02:39

**Ironman Italy Cervia**  
Jun 20, 2027  
**In 272 days**  
Target: 11:43:58  
Predicted: ~11:23:37

## Last 30 Days

**n/a** PACE

**Cycling (7)**  
**234km** TOTAL  
**18.9 km/h** SPEED

## AI Coaching

Over the last 4 weeks training volume has been very low and inconsistent — only 10 sessions recorded across all three disciplines, with no running at all and sleep chronically short (many nights under 5 hours, several under 4 hours). Body battery readings are generally moderate-to-low (peaking at 80 on one day), confirming accumulated fatigue from poor sleep rather than training overload. With the Half Oceanman 5,000m swim just 14 days away, the priority is arriving fresh: swim confidence is building (2km open-water sessions at avg ~160bpm), but the current plan's long ride and long run this weekend still carry meaningful fatigue risk.

- Sleep is your biggest limiter right now — chronically short nights (several under 4 hours) are suppressing recovery and adaptation far more than any training tweak; prioritise 7–8 hours nightly this week above all else.
- Your open-water swim pace (~28–31 min/km) is slower than your 2:30/100m race target (~25 min/km); add one focused pool session this coming week with 100m pace reps to rehearse race rhythm before the taper begins.
- Cap this Saturday's long ride at 60–75 minutes of easy Z2 (no threshold work) and Sunday's long run at 10–12km easy — the plan already flags these reductions and they are the right call with 13–14 days to race day.
- Avoid the Wk14 Thursday cycling intervals (5×5min @ Z4 Threshold, 210–244W) entirely — at 10 days out from the Half Oceanman, threshold bike work creates residual fatigue without improving race-day fitness in the swim.
- In the 2–3 days immediately after the Half Oceanman (Oct 3–5) before the Treviso 10K build resumes, take full rest rather than jumping back into the long run planned for Oct 4 — post-race recovery protects your 10K legs.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

| DATE       | DISCIPLINE | PROPOSED                                                                                   | TYPE     |
|------------|------------|--------------------------------------------------------------------------------------------|----------|
| 2026-09-19 | Cycling    | 60–70 min easy Z2 spin at 120–140W, flat terrain, perceived effort only — no distance targ | DECREASE |
| 2026-09-20 | Running    | Easy 8–10km run at 6:45–7:15/km, HR ≤135bpm, walk-break if needed — cap at 55 minutes and  | DECREASE |
| 2026-09-22 | Swimming   | 2,000m pool session focused on race-pace rehearsal: 400m warm-up, 8×100m @ 2:25–2:30/100m  | REPLACE  |
| 2026-09-24 | Cycling    | Skip entirely — convert to full rest or a maximum 20-min easy legs-out spin at 90–110W, no | SKIP     |
| 2026-09-26 | Cycling    | 45–60 min easy Z2 spin at 128–150W on flat roads — this is race week (7 days out); volume  | DECREASE |
| 2026-10-04 | Running    | Full rest day — no running. Athlete raced the Half Oceanman 5,000m swim on Oct 3; allow 48 | SKIP     |
