Race Targets

Half Oceanman
Oct 03, 2026
In 21 days
Target: 2:05:00
Predicted: ~2:20:09

Treviso 10K Tiramisu Run
Oct 11, 2026
In 29 days
Target: 57:30

Marathon
Feb 07, 2027
In 148 days
Target: 4:02:39

Ironman Italy Cervia
Jun 20, 2027
In 281 days
Target: 11:43:58
Predicted: ~10:54:05

AI Coaching

The last 4 weeks show a very low and inconsistent training volume — only 8 sessions logged, with chronic sleep deprivation (most nights under 6 hours, several under 5) and persistently low body battery scores dragging recovery well below what's needed for race preparation. With the Half Oceanman 5,000m swim just 21 days away, swimming volume is critically underdone: only three open-water sessions totalling ~4km in the block, all at elevated HR (avg ~160 bpm), suggesting significant aerobic swim fatigue. Cycling base is more present but still modest, and running is entirely absent from the recorded data.

- Prioritise sleep above all else this week — chronic under-recovery (avg ~340 min/night, body battery frequently under 40) is the single biggest limiter to race-day performance and must be addressed before adding training load.
- For the Half Oceanman swim (21 days), shift pool sessions this week to confidence-building continuous sets at 2:30/100m or slower — avoid high-intensity swim work that spikes HR further and adds to accumulated fatigue.
- The Wk13 Saturday long ride (19 Sep) is already AI-adjusted to 60km/120 min — honour that cap strictly; pushing to 115km at this recovery deficit and race proximity would be counterproductive.
- Drop the Wk14 threshold cycling intervals (24 Sep, 5x5min @ 210–244W) given that race week begins Oct 2 — swap to a Z2 maintenance spin to avoid carrying residual leg fatigue into the Half Oceanman.
- Running volume post-Half Oceanman (Oct 4 long run at 21.5km) should be reduced to 12–14km easy given the expected swim race fatigue — arriving fresh for the Treviso 10K (Oct 10) matters more than hitting the planned distance.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-09-13	Running	12km easy @ 6:45–7:00/km, cap at 85 min, flat route, HR ≤140 bpm — no negative-split effort	DECREASE
2026-09-24	Cycling	45 min Z2 maintenance spin @ 128–155W, flat/steady, HR ≤135 bpm — no threshold work	REPLACE
2026-09-26	Cycling	60–70km @ 120–145W, cap at 150 min, no tempo blocks — keep it purely aerobic and comfortab	DECREASE
2026-09-27	Running	10km easy @ 6:45–7:00/km, cap at 70 min, flat, HR ≤135 bpm	DECREASE
2026-10-04	Running	12–13km easy @ 6:45–7:15/km, cap at 85 min — post-race recovery run, focus on feel not pac	DECREASE
2026-09-15	Swimming	2,200m total: 400m warm-up drills, then 3x500m continuous @ 2:35–2:40/100m with 60s full r	REPLACE
