AI Coaching

- The last 4 weeks show severely disrupted training — only a single low-intensity hiking session recorded, with consistently poor sleep (multiple nights under 5 hours and body battery readings as low as 0–11) indicating the athlete has been ill and deeply fatigued since at least mid-August. The athlete self-reported illness on 15 August and intended a slow restart from 17 August, but wellness data through 22 August shows only modest recovery with body battery still fragile. With the Half Oceanman swim (5,000m) just 42 days away, the immediate priority is a careful, structured return to training — starting with swim volume since that is the race-defining discipline — while respecting the body's incomplete recovery.
- Prioritise sleep above all else this coming week: body battery has been chronically suppressed (frequently under 30) and no training adaptation can occur in this state — target 7–8 hours per night as a non-negotiable foundation for the return-to-training block.
 - Start swim sessions immediately as the highest-priority discipline: with a 5,000m Half Oceanman swim in 42 days at 2:30/100m, aerobic swim fitness must be rebuilt first — aim for 2–3 pool sessions of 1,500–2,000m this week at easy effort before progressing.
 - Keep all running and cycling this week well below planned durations and intensities — the 180-min long run on Sunday 23 August is unrealistic after three weeks of near-zero training and should be capped at 60–75 minutes at a conversational pace.
 - Use the Wednesday and Friday rest/recovery slots as true rest, not optional light movement — the wellness data shows the body has not yet restored sufficient reserves to absorb double-day training weeks.
 - From Week 11 onward, progressively increase open-water or pool swim volume by no more than 10–15% per week toward a 3,500–4,000m long swim by race week, ensuring at least one session per week simulates race-pace efforts at 2:30/100m.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-08-23	Running	Replace with an easy 60–70 min continuous run at 6:30–7:00/km (HR ≤138 bpm); stop immediat	DECREASE
2026-08-22	Cycling	Reduce to 40 min very easy spin at 90–110W (HR ≤125 bpm) or skip entirely if body battery	DECREASE
2026-08-25	Running	Keep the 35 min easy run at 6:30–7:00/km (HR ≤135 bpm); omit the strides entirely this wee	DECREASE
2026-08-29	Cycling	Cap the ride at 45–60 min at 110–130W (Z1–low Z2); drop the evening open-water swim additi	DECREASE
2026-08-30	Running	Replace with a 75–90 min easy run at 6:30–7:00/km (HR ≤140 bpm); if the Tuesday run this w	DECREASE
2026-08-28	Swimming	Retain this session as the week's swim priority but restructure to 60 min: 400m warm-up, 4	DECREASE
