Race Targets

Half Oceanman
Oct 03, 2026
In 33 days
Target: 2:05:00
Predicted: ~2:18:38

Treviso 10K Tiramisu Run
Oct 11, 2026
In 41 days
Target: 57:30

Marathon
Feb 07, 2027
In 160 days
Target: 4:02:39

Ironman Italy Cervia
Jun 20, 2027
In 293 days
Target: 11:43:58
Predicted: ~8:34:52

AI Coaching

- Training volume over the last 4 weeks has been very low — only 3 sessions recorded (one short open-water swim, one indoor ride, and one harder open-water swim on 30 August), which is well below what the plan prescribes. Sleep quality is consistently poor, with most nights under 6 hours and body battery readings frequently in the low-to-mid range, suggesting chronic under-recovery. With the Half Oceanman swim (5,000m) just 33 days away, the priority must shift immediately to rebuilding swim-specific volume and aerobic base while protecting recovery.
- With the Half Oceanman 5,000m swim 33 days away, your swim volume is the most urgent gap — commit to both pool sessions each week (Tuesday and Friday) and target at least 2,000m per session, building toward 3,000m by mid-September to give yourself confidence at race pace of 2:30/100m.
 - Your average sleep is well under 7 hours on most nights and body battery is regularly below 40 — prioritise 7–8 hours of sleep as non-negotiable, as no training adaptation can outpace chronic sleep debt at this stage of your build.
 - The open-water swim on 30 August produced a training load of 189 and average HR of 161 — treat this week's Tuesday swim as technique-focused rather than hard effort, easing back into pool rhythm before ramping intensity in Weeks 12–13.
 - The Treviso 10K is 41 days away (one week after the Half Oceanman) — the tempo run sessions in Weeks 11 and 12 (5:35–5:50/km) align well with your 5:45/km race target, so hit these consistently and they double as race-specific prep.
 - Given the very low recent training load, avoid jumping straight into the full 240-minute long ride on Saturday 5 September — treat Week 11 as a re-entry week, keeping efforts controlled at the lower end of prescribed power zones.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-09-05	Cycling	80km @ 128–155W (lower half of Z2 only), cap at 180 min — no Z3 Tempo blocks this week	DECREASE
2026-09-06	Running	13–14km @ 6:30–6:45/km (comfortable aerobic), cap at 90 min	DECREASE
2026-09-04	Swimming	Pool swim 2,200–2,500m with emphasis on technique drills (catch, pull, bilateral breathing	REPLACE
2026-09-11	Swimming	Pool swim 2,500–3,000m including a continuous 1,500m aerobic block @ 2:30/100m to simulate	INCREASE
2026-09-18	Swimming	Pool swim 3,000–3,500m with a 2,000m continuous block @ 2:30/100m, then 4×200m race-pace e	INCREASE
2026-09-19	Cycling	90km @ 128–155W, cap at 180 min — no Z3 blocks; keep legs fresh ahead of Half Oceanman on	DECREASE
