Race Targets

Half Oceanman
Oct 03, 2026
In 7 days
Target: 2:05:00
Predicted: ~2:27:55

Treviso 10K Tiramisu Run
Oct 11, 2026
In 15 days
Target: 57:30
Predicted: ~1:02:32

Marathon
Feb 07, 2027
In 134 days
Target: 4:02:39
Predicted: ~4:23:55

Ironman Italy Cervia
Jun 20, 2027
In 267 days
Target: 11:43:58
Predicted: ~15:55:06

AI Coaching

Over the last 4 weeks you've accumulated a solid cycling base (4–5 road rides, including two 200+ min efforts) with consistent open-water swimming, but running has been almost entirely absent — only one run recorded at a very high HR (169 bpm for 10km at 6:15/km), which signals the legs are not yet adapted to running load. Sleep is chronically short (many nights under 6 hours, several under 4.5 hours) and body battery regularly sits in the 40–60 range, suggesting accumulated fatigue that needs managing carefully with two races in the next 15 days. The Half Oceanman 5 km swim in 7 days is the immediate priority; your open-water pace (~28–31 min/km) implies significant room to close to the 2:30/100m target, and a clean taper this week is more valuable than any additional training stimulus.

- Protect sleep above everything else this week — you have multiple nights under 5 hours recorded; even one extra hour per night before the Half Oceanman will do more for your race result than any training session.
- Today's planned 120 km long ride (Wk14) should be cut to 60–75 km at pure Z2 (128–150 W) with no tempo blocks — your body battery is at 0–2 this morning and a 4-hour effort 7 days out from the swim race risks carrying residual fatigue into race day.
- Tomorrow's planned 21 km long run should be replaced with a 30–40 min very easy jog (7:00+/km, HR ≤130) — with only one run in 4 weeks and a 10K race in 15 days, a 21 km effort now risks injury or excessive soreness ahead of Treviso.
- For the Half Oceanman swim: seed yourself conservatively, sight frequently (Malta/open-water conditions), and aim for even splits across the 5 km — your recent HR data shows you go out hard (avg 160–161 bpm) so consciously hold back the first 1,000 m.
- After the Half Oceanman (Oct 3), prioritise 2 full rest days before resuming any training — the plan already builds in a 21.5 km long run on Oct 4 which should be skipped or converted to an easy 30-min walk/jog given back-to-back race efforts.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):
