Race Targets

Half Oceanman
Oct 03, 2026
In 63 days
Target: 2:05:00
Predicted: ~2:07:30

Treviso 10K Tiramisu Run
Oct 11, 2026
In 71 days
Target: 57:30
Predicted: ~1:01:53

Marathon
Feb 07, 2027
In 190 days
Target: 4:02:39
Predicted: ~4:21:08

Ironman Italy Cervia
Jun 20, 2027
In 323 days
Target: 11:43:58
Predicted: ~16:55:47

⚠ Pre-Race Conflicts

DATE	DISCIPLINE	SESSION	DURATION	CONFLICT
2026-10-03	Cycling	Wk15 Long Ride	240min	0d before Half Oceanman
2026-10-11	Running	Wk16 Long Run	180min	0d before Treviso 10K Tiramisu Run

🤖 AI Coaching

The last 4 weeks show a very inconsistent training block dominated by severe sleep deprivation — the majority of nights fell below 6 hours, with several under 4 hours and body battery repeatedly crashing to single digits, indicating the athlete is carrying significant accumulated fatigue into August. Training volume was low and fragmented, with only 9 sessions logged and no cycling until July 20, yet the July 18 run at 179 bpm average HR and training load 208 signals a dangerous spike on an under-recovered system. With the Half Oceanman 5,000m swim just 63 days away, the priority must be rebuilding sleep consistency and aerobic base — especially swim volume — before any intensity is reintroduced.

- Treat sleep as the primary training variable for the next two weeks: aim for 7.5–8 hours nightly, use a fixed bedtime, and apply the body-battery gates already embedded in the plan before executing any session above Z1.
- Swim volume is critically underdeveloped for a 5,000m Half Oceanman race in 63 days — prioritise completing both weekly pool sessions (Tue + Fri) even if the cycling or running session on the same day must be shortened or skipped.
- Avoid any running effort above 155 bpm until body battery consistently wakes above 50 for three consecutive days; the July 18 run at 179 bpm average on depleted recovery is the clearest injury-risk signal in the data.
- For the Treviso 10K on October 11, the race-pace interval work scheduled in weeks 9–10 (4–5 × 1 km at 5:40–5:50/km) is appropriate — but only execute those sessions once sleep gates are met, and ensure the Long Run on Oct 11 race day is converted to rest (flagged below).
- Begin progressive open-water swim sessions in Malta sea (already warm in August) from mid-August onward to simulate Half Oceanman race conditions — target 2,000m continuous efforts by end of August to build confidence for the 5,000m race distance.
