Race Targets

**Half Oceanman**
Oct 03, 2026
In 18 days
Target: 2:05:00
Predicted: ~2:20:09

**Treviso 10K Tiramisu Run**
Oct 11, 2026
In 26 days
Target: 57:30

**Marathon**
Feb 07, 2027
In 145 days
Target: 4:02:39

**Ironman Italy Cervia**
Jun 20, 2027
In 278 days
Target: 11:43:58
Predicted: ~11:02:20

AI Coaching

Training volume over the last 4 weeks has been very low and inconsistent, with long gaps between sessions and chronically short sleep (many nights under 5 hours) driving persistently low body battery scores — rarely above 60 and frequently in the 20–40 range. The most recent week (Sept 5–8) showed a positive uptick with meaningful bike and swim volume, suggesting a return to form, but the overall base heading into the Half Oceanman in 21 days is thin. With the 5,000m open-water swim just 3 weeks away as the immediate priority, the focus must be on consolidating swim fitness, managing fatigue carefully, and arriving rested rather than trying to cram volume.

- Sleep is the single biggest limiter right now — most nights are 4–6 hours and body battery is consistently depleted; prioritise 7–8 hours per night this week and next, as no training adaptation is worth the recovery deficit being accumulated.
- With the Half Oceanman 5,000m swim 21 days away and your recent open-water sessions at ~28:30–28:47/100m pace, your target of 2:30/100m is achievable but will need 2–3 quality pool sessions before race day focusing on holding that pace continuously for 1,000m+ blocks.
- The Sept 12 Wk12 long ride (110km, 240 min) is ambitious given your current fatigue state and proximity to the Half Oceanman — cap it at 60–75 km and 120 minutes at Z2 to avoid digging a recovery hole you can't climb out of before race day.
- Running sessions in the pre-Oceanman taper window (Sept 19–Oct 3) should stay short and easy — the Half Oceanman is a swim-only event, so run legs need only be maintained, not built; keep efforts under 60 minutes at easy aerobic pace.
- Post-Half Oceanman (Oct 4 onwards), your Treviso 10K is only 8 days later — plan at least 2–3 recovery days after the swim race before any quality run session, and treat the Oct 4 long run in the current plan as a definite skip if the Oceanman race leaves you fatigued.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-09-12	Cycling	60–70km @ 120–145W (Z2 easy end), cap at 120 minutes — no tempo blocks; treat as aerobic m	DECREASE
2026-09-13	Running	10–12km @ 6:45–7:00/km easy, cap at 75 minutes — flat effort, no negative-split push	DECREASE
2026-09-15	Cycling	Replace with 45-minute Z2 endurance spin at 128–155W, flat and steady — no threshold work	REPLACE
2026-09-18	Swimming	2,000–2,500m total: 400m warm-up drills, 2x600m continuous @ 2:30/100m with 90s rest, 4x10	DECREASE
2026-09-24	Cycling	Skip entirely or replace with 20-minute very easy spin at under 120W as a leg flush only —	SKIP
2026-10-04	Running	Skip entirely — full rest or a 20-minute gentle walk only; assess fatigue before any decis	SKIP
