🤖 AI Coaching

> Training volume over the last 4 weeks has been very low, with only three recorded sessions — two indoor cardio efforts and one open water swim — suggesting significant under-training relative to the upcoming 5K Open Water Race on 25 October and the Marathon 106 days away. Wellness data from late September shows consistently poor sleep (frequently under 4 hours) and critically low body battery readings, which likely explains the reduced training output. With the 5K open water race tomorrow, the priority is arriving fresh; the Marathon build must begin in earnest from next week.

- Tomorrow's 5K open water race (25 Oct) is your nearest target — treat today's long ride as a very easy activation spin of 30–40 minutes at low Z2 (128–145W) rather than the full 60km, to preserve legs and energy for race day.
- Your recent sleep data shows chronic short sleep (as low as 186–218 min per night) which is a major recovery limiter — prioritise getting 7–8 hours of sleep every night this week to arrive at the race and the training block ahead in better condition.
- From Week 19 onward, the Marathon 106 days away must drive your run build — protect your long runs (18.8km, 20km) and ensure Tuesday/Thursday run sessions are completed consistently, as recent weeks show little to no run volume logged.
- Pool swim sessions in Weeks 19–22 are set at ≤2:30/100m; given your recent open water pace of ~29:26/km (~2:57/100m), focus the drill component on stroke efficiency and catch technique to close the gap before the Marathon block fully displaces swim volume.
- Bike interval work in Week 20 (5x5min @ Z4, 210–244W) will be a significant intensity spike given recent low training load — ensure you complete the Week 19 long ride and easy spin first, and reduce reps to 3–4x5min if fatigue is high entering that week.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-10-24	**Cycling**	Short activation ride — 30–40 min @ 128–145W (low Z2), flat effort, no tempo blocks, stop	DECREASE
2026-10-31	**Cycling**	Long ride 60–70km @ 128–177W (Z2), ~180–200 min — build back gradually given the very low	DECREASE
2026-11-01	**Running**	Long run 14–16km @ 6:30–7:00/km, easy aerobic effort — consolidate fitness before pushing	DECREASE
