Race Targets

Half Oceanman
Oct 03, 2026
In 56 days
Target: 2:05:00
Predicted: ~2:07:30

Treviso 10K Tiramisu Run
Oct 11, 2026
In 64 days
Target: 57:30
Predicted: ~56:39

Marathon
Feb 07, 2027
In 183 days
Target: 4:02:39
Predicted: ~3:59:04

Ironman Italy Cervia
Jun 20, 2027
In 316 days
Target: 11:43:58
Predicted: ~16:33:43

AI Coaching

- The last 4 weeks show a very disrupted training block: a solid base of swimming and cycling in mid-July was followed by a high-intensity run on 18 July (avg HR 179 bpm, training load 208) that likely contributed to fatigue, and the athlete has been ill since 2 August with doctor-mandated rest through at least 11 August. Sleep data confirms chronic under-recovery across the final two weeks (multiple nights under 5 hours, body battery repeatedly in single digits), and the most recent wellness markers are critically low. With the Half Oceanman 5,000m swim 56 days away as the nearest priority race, the immediate focus must be a safe illness return before rebuilding swim volume.
- Treat the 11 August return-to-training day as a true test day — run or walk only at HR ≤135 bpm and skip the pool swim entirely if you feel any lingering symptoms, since the 5,000m Half Oceanman demands full immune recovery now more than any single session.
 - Prioritise sleep above all else this week: body battery has been in single digits for most of late July and early August, and no training adaptation is possible at this recovery level — aim for 7–8 hours per night as a non-negotiable gate before any intensity session.
 - From Week 9 onwards, progressively rebuild open-water swim volume toward 3,000–4,000m weekly to prepare for the 5,000m Half Oceanman on approximately 3 October — treat every Friday and Saturday swim as the highest-priority sessions in the week.
 - During the abroad week (24–30 August), front-load swim and run sessions since hotel pool or open-water access is likely easier to arrange than a bike; flag in advance whether a bike hire is feasible for the 100km Saturday ride or replace it with an extended swim block.
 - Avoid repeating the 18 July mistake of running at HR 179 bpm in a base-building phase — until the Treviso 10K (64 days away), all running intervals should be capped at 5:40–5:50/km at a controlled 7–8/10 effort, not maximal.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-08-11	Swimming	Skip entirely on 11 August — do the easy 30–35 min walk/jog only; if that goes well with n	SKIP
2026-08-13	Cycling	Reduce to 30 min at 110–130W on a flat route only, and cut short immediately if HR exceeds	DECREASE
2026-08-22	Cycling	Cap the ride at 60 km at 128–150W with no tempo blocks; skip the morning open-water add-on	DECREASE
2026-08-29	Cycling	If bike access is available abroad, complete the 100km ride; drop the evening swim additio	DECREASE
2026-08-28	Swimming	Retain as the week's highest-priority session but confirm pool access at the abroad locati	REPLACE
2026-09-05	Cycling	Complete the 105km ride but keep it strictly at 128–165W with no tempo blocks this week —	DECREASE
