Race Targets

Half Oceanman
Oct 03, 2026
In 61 days
Target: 2:05:00
Predicted: ~2:07:30

Treviso 10K Tiramisu Run
Oct 11, 2026
In 69 days
Target: 57:30
Predicted: ~1:01:53

Marathon
Feb 07, 2027
In 188 days
Target: 4:02:39
Predicted: ~4:21:08

Ironman Italy Cervia
Jun 20, 2027
In 321 days
Target: 11:43:58
Predicted: ~16:55:47

AI Coaching

The last 4 weeks show a fragmented training block dominated by chronic sleep deprivation (multiple nights under 4 hours, body battery repeatedly hitting single digits) and very low overall volume — only 9 sessions totalling roughly 10 hours across all disciplines. The July 18 run at 179 bpm average HR stands out as a significant red flag, suggesting the athlete is either racing or severely fatigued during efforts, and the near-total absence of cycling and structured swim training leaves the Half Oceanman (63 days away, 5000m swim) severely under-prepared. Recovery must be the immediate priority before any meaningful training stimulus can be absorbed.

- Sleep is the single biggest limiter right now — 11 of the last 28 nights were under 5 hours and body battery hit 2–5 on multiple occasions; target a non-negotiable 7-hour minimum window each night this week before layering any training stress back on.
- The Half Oceanman 5000m swim is 63 days away and swim training has been almost completely absent for 4+ weeks; starting with two pool sessions per week (Tuesday and Friday as planned) and building to 3×/week by week 9 is critical — prioritise these above all other disciplines.
- The July 18 run at 179 bpm average HR (likely near or above max for an amateur) suggests efforts are either uncontrolled or performed under severe fatigue; enforce a strict HR cap of 140 bpm on all easy runs until sleep and body battery normalise above 50.
- Cycling volume is very low relative to Ironman Cervia demands, but with the Half Oceanman and Treviso 10K both within 9 weeks, keep the Saturday long ride as the sole cycling priority and avoid adding midweek bike sessions until sleep stabilises in week 8.
- The Treviso 10K (71 days away, target 5:45/km) requires controlled race-pace work — the planned 4×1km and 5×1km sessions in weeks 9–10 are well-timed, but only execute them if the sleep gate (6.5h average) is met; a well-rested moderate effort will outperform a fatigued hard session every time.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-08-04	Swimming	Pool swim 45 min, ~1,200m total: 300m easy warm-up, 600m continuous aerobic at 2:30–2:35/1	DECREASE
2026-08-08	Cycling	60 min Z1 spin at 120–135W maximum, flat route, cadence focus (85–90 rpm), HR cap 130 bpm	DECREASE
2026-08-16	Running	60 min pool swim, 2,000m at 2:30/100m: 400m warm-up, 8×100m @ 2:25/100m with 15-sec rest (	REPLACE
