AI Coaching

The last 4 weeks have been severely disrupted by illness starting ~2 August, with almost no structured training since the 20 July long ride and wellness data showing chronically low body battery (frequently below 30, multiple days at 0–11) and heavily fragmented sleep throughout late July and early August. Only a 5.2km run and a gentle hike have been completed, and as of 15 August the athlete reports still feeling unwell — this represents roughly 3.5 weeks of near-total detraining on top of acute illness stress. The immediate priority is a cautious, symptom-gated return to training this week, protecting the Half Oceanman (49 days) and Treviso 10K (57 days) targets rather than chasing lost fitness too quickly.

- Apply a strict gate for every session this week (Aug 15–17): only train if resting HR is within 5 bpm of your healthy baseline and body battery is ≥50 before you start — if either threshold isn't met, swap the session for an additional rest day.
- For the Half Oceanman in 49 days, prioritise swim volume above all other disciplines from week of 18 Aug onward; aim to build to at least one 3,000–3,500m continuous swim by mid-September so the 5,000m race distance doesn't arrive as a shock.
- Keep all running in Zone 2 (HR ≤145 bpm, conversational pace) for the next two weeks — your 18 July run at 179 bpm avg over just 5.2km shows intensity was already too high pre-illness; there is no fitness base right now to justify quality or tempo work before the end of August.
- During the week abroad (24–30 Aug), default to pool or open-water swimming as the primary training stimulus — it requires no equipment, is low-impact for a returning body, and directly serves the Half Oceanman goal; treat any running as a bonus only if sleep and body battery are consistently good.
- Sleep is the single biggest lever right now: 11 of the last 20 nights were under 6 hours and several recorded body battery peaked at 0–11 — commit to a fixed sleep window of 22:30–06:30 this week and treat it as a training session in itself.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-08-15	Cycling	Skip entirely. Replace with 20–30 min flat walk or full rest. No cycling until at least on	SKIP
2026-08-16	Running	Replace with an easy 20–25 min walk/jog test at fully conversational effort (HR ≤135 bpm);	DECREASE
2026-08-20	Running	Replace with a continuous 25–30 min easy jog at 6:30–7:00/km (HR ≤140 bpm) — no intervals.	REPLACE
2026-08-22	Cycling	Cap at 60 min indoors or on a flat route at 110–130W (well below Z2 ceiling); target HR 12	DECREASE
2026-08-25	Running	Replace with 35 min easy continuous run at 6:15–6:30/km (HR ≤142 bpm). If this goes well w	REPLACE
2026-08-29	Cycling	Execute the swim replacement as primary (2,000–2,500m open water or pool at easy effort, n	DECREASE
