Race Targets

**Half Oceanman**
Oct 03, 2026
In 63 days
Target: 2:05:00
Predicted: ~2:07:30

**Treviso 10K Tiramisu Run**
Oct 11, 2026
In 71 days
Target: 57:30
Predicted: ~1:01:53

**Marathon**
Feb 07, 2027
In 190 days
Target: 4:02:39
Predicted: ~4:21:08

**Ironman Italy Cervia**
Jun 20, 2027
In 323 days
Target: 11:43:58
Predicted: ~16:55:47

⚠ Pre-Race Conflicts

DATE	DISCIPLINE	SESSION	DURATION	CONFLICT
2026-10-03	Cycling	Wk15 Long Ride	240min	0d before Half Oceanman
2026-10-11	Running	Wk16 Long Run	180min	0d before Treviso 10K Tiramisu Run
2027-02-07	Other	Wk33 *** RACE DAY: FULL MARATHON ***	180min	0d before Marathon
2027-06-20	Swimming	Wk52 *** RACE DAY: IRONMAN ITALY CERVIA ***	180min	0d before Ironman Italy Cervia

🤖 AI Coaching

The last 4 weeks show severely disrupted recovery, with chronic sleep deprivation (multiple nights under 5 hours, including 41 min on July 27), body battery regularly below 30, and training load that spiked sharply on July 18 (HR 179 bpm, load 208) before collapsing to hiking only. The mandatory pre-race scheduling conflicts for Half Oceanman and Treviso 10K must be resolved immediately, as race-day sessions are currently planned on race dates. The priority now is rebuilding sleep, absorbing the accumulated fatigue deficit through the first two weeks of August, then building controlled swim volume toward the Half Oceanman 5km on October 3.

- Make sleep your number-one training variable this week: target 7+ hours nightly and treat any session with morning body battery below 40 as an automatic skip or replace-with-walk day — fitness built on a depleted system is not retained.
- Swim volume must increase progressively from now through late September to prepare for the Half Oceanman 5km; aim to add one open-water session per week from mid-August onward, targeting 3,500–4,000m total swim volume per week by mid-September.
- The July 18 run at 179 bpm average HR and 5:02/km (load 208) was a red-flag intensity spike that almost certainly contributed to the subsequent training collapse — avoid any sub-6:00/km running until sleep is consistently above 6 hours for five consecutive nights.
- Begin introducing race-pace swim intervals (2:25–2:30/100m sets of 400–600m) in pool sessions from the week of August 11 so that pacing at 2:30/100m over 5km feels familiar by early October.
- The Treviso 10K on October 11 (71 days away) is achievable at 5:45/km given your July 15 run showed 5:02/km pace capacity, but only if running volume is rebuilt gradually — keep all runs at 6:30–7:00/km aerobic pace until at least mid-August before introducing any race-pace strides.
