AI Coaching

The last 4 weeks show a predominantly bike-heavy and swim-focused block with very limited running (only one run recorded at a high HR of 169 bpm for 10 km at 6:15/km), which is concerning given the Treviso 10K in 8 days. Sleep quality is consistently poor — most nights average 3–4 hours, well below the 7–8 hours needed for adequate recovery — and body battery scores regularly dip to very low levels, suggesting accumulated fatigue. Today's 5 km open-water race (Half Oceanman) is the immediate priority; the week after must balance post-race recovery with a controlled, low-stress taper into the Treviso 10K on October 10.

- Prioritise sleep above all else this coming week — your body battery has been critically low (hitting 0–7 on multiple days) and no amount of training will compensate for chronic sleep deprivation of 3–4 hours per night.
- For the Treviso 10K taper, keep Tuesday's interval session very short and controlled (3–4 × 800 m max, not 6), then go fully easy Thursday–Friday; your one recent run was already at 169 bpm so the nervous system is not fresh.
- Add at least one easy 20–30 min shakeout run between now and October 9 to keep run legs feeling sharp without accumulating fatigue — your running volume has been near zero for weeks.
- On race day (Oct 10) target 5:45/km but be prepared to go slightly more conservative in the first 3 km given the lack of recent run-specific training — a positive split 10K risks blowing up without a solid recent base.
- Post-Treviso, gradually rebuild running volume through weeks 17–18 with the weekly long runs in the plan, and consider adding a second run day per week to address the clear run-frequency deficit before the marathon block begins.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-10-04	Rest	Full rest only — no walking or jogging. Today is 5 km open-water race recovery; keep feet	DECREASE
2026-10-06	Running	3 × 800 m at 5:10–5:20/km with 90 sec standing recovery, total ~30 min including warm-up a	DECREASE
2026-10-06	Swimming	Skip the pool swim — single training session day only (the shortened run); legs and should	SKIP
2026-10-08	Cycling	Skip the evening cycling spin entirely — strength session only (shortened to 30 min, bodyw	SKIP
2026-10-13	Running	Add a 30 min easy recovery run at 7:00–7:30/km on Tuesday October 13 in place of or before	ADD
2026-10-18	Running	Cap at 13–14 km at 6:30–7:00/km (approximately 90–100 min) — do not attempt the full 17.6	DECREASE
