> No training or wellness data has been recorded over the last 4 weeks, making it impossible to assess current fitness, fatigue, or adherence to the plan. With a Marathon 92 days away targeting sub-4h (5:45/km), this is a critical build period and consistency starting now is essential. The upcoming plan is well-structured, but the lack of any logged activity means we must assume a de-trained baseline and approach the next weeks with controlled, honest effort.

- Prioritise completing the 10K race on 2026-11-08 at a controlled, honest effort — use it as a fitness benchmark rather than an all-out race, since there is no recent training data to gauge current form.
- With 92 days to the Marathon, your Tuesday and Thursday running sessions are your most important training touchpoints — treat the 6x800m intervals (Wk21, Wk22) as the primary quality sessions and don't sacrifice them for cycling or social commitments.
- Begin logging sleep and body battery data consistently from this week onwards — without wellness metrics, it's impossible to detect overreaching or under-recovery before it becomes an injury or illness.
- On the long Saturday rides (100–115km), keep strictly to Z2 power (128–177W) until you have at least 2–3 weeks of logged data; do not add the Z3 Tempo blocks until you can confirm recovery is adequate between sessions.
- Given the Marathon target of sub-4h (5:45/km), ensure Sunday long runs are completed at the prescribed 6:15–6:45/km — running too fast on these aerobic sessions is the most common mistake at this stage of a marathon build and increases injury risk.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-11-08	**Running**	Run the 10K race at a controlled effort — aim for even splits around 5:45–5:50/km rather t	DECREASE
2026-11-14	**Cycling**	Complete 80–90km strictly at Z2 (128–177W) only — skip the Z3 Tempo blocks entirely this w	DECREASE
2026-11-15	**Running**	Reduce to 16–17km @ 6:30–6:45/km (top of the easy range), keeping it fully aerobic and cut	DECREASE
