Race Targets

**Half Oceanman**
Oct 03, 2026
In 63 days
Target: 2:05:00
Predicted: ~2:07:30

**Treviso 10K Tiramisu Run**
Oct 11, 2026
In 71 days
Target: 57:30
Predicted: ~1:01:53

**Marathon**
Feb 07, 2027
In 190 days
Target: 4:02:39
Predicted: ~4:21:08

**Ironman Italy Cervia**
Jun 20, 2027
In 323 days
Target: 11:43:58
Predicted: ~16:55:47

AI Coaching

The last 4 weeks show a severely fragmented training block: only 9 sessions completed, dominated by open-water swims and sporadic runs, with a single long ride on July 20. Recovery metrics are critically concerning — multiple nights of under 3 hours of sleep, body battery readings regularly below 30, and a near-complete collapse in the final week of July (41 min sleep on July 27, body battery of 2 on July 30) indicate accumulated fatigue that makes meaningful training adaptation impossible right now. With the Half Oceanman 63 days away requiring a 5km open-water swim at 2:30/100m, and the Treviso 10K 71 days away at 5:45/km, the immediate priority is rebuilding sleep and recovery before resuming structured load.

- Sleep is the single highest-leverage intervention right now — target 7+ hours nightly for the next 10 days before resuming any session with a training load above 60; use body battery ≥50 on waking as a daily green light to train.
- Swim volume must become your training priority given the Half Oceanman (5km OW) in 63 days: aim for 3 pool sessions per week from Week 7 onward, progressively building from 1,500m to 3,000m+ per session, with at least one open-water session per week in Malta's warm sea.
- The July 18 run at 179 bpm average HR (training load 208) against a backdrop of poor sleep almost certainly contributed to the crash that followed — reintroduce running conservatively at HR ≤140 bpm before adding any pace work.
- Add at least one open-water swim to Week 9 (Aug 22 morning) as planned, prioritising race-simulation pacing at 2:25–2:30/100m over the bike distance that week — the swim is the limiter for your nearest A-race.
- For the Treviso 10K (71 days), pace-specific work at 5:45/km should only begin once you are sleeping consistently — the Week 9 and Week 10 interval sessions in the plan are appropriately timed but are contingent on the recovery gate being met.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-08-04	Swimming	Pool swim 45 min, 1,200–1,500m total: 300m warm-up, 6×100m at 2:25–2:30/100m with 20-sec r	REPLACE
