Race Targets

Half Oceanman
Oct 03, 2026
In 14 days
Target: 2:05:00
Predicted: ~2:24:16

Treviso 10K Tiramisu Run
Oct 11, 2026
In 22 days
Target: 57:30

Marathon
Feb 07, 2027
In 141 days
Target: 4:02:39

Ironman Italy Cervia
Jun 20, 2027
In 274 days
Target: 11:43:58
Predicted: ~11:05:28

AI Coaching

- Over the last 4 weeks, training volume has been notably low and inconsistent, with only 10 sessions recorded across swimming, cycling, and no running whatsoever — a concern with a Half Oceanman 5km swim 14 days away and a 10K run 22 days away. Swimming pace in open water has been sitting around 28–31 min/km, which is significantly slower than the 2:30/100m race target, and the recent 63-minute 2km swim on Sep 19 at avg HR 151 bpm shows meaningful cardiovascular effort at that pace. Sleep quality is chronically poor (many nights under 5–6 hours) and body battery has been regularly low, suggesting recovery is the primary limiter right now rather than training load.
- Prioritise sleep above all else this week — with the Half Oceanman 14 days out and consistently low body battery (frequently below 50), inadequate sleep is directly impairing recovery and race readiness more than any single training session can fix.
 - For the Half Oceanman swim target of 2:30/100m, your recent open water pace of ~29–31 min/km (approx 2:54–3:06/100m) is 20–35 seconds per 100m off target — squeeze in one focused pool session before race week to practise controlled pacing at or near 2:30/100m rather than going by feel.
 - There is zero running in the last 4 weeks, which is risky with a 10K race only 22 days away — keep the Sep 20 long run as prescribed (10–12 km easy) and ensure the Sep 22 maintenance run actually happens to maintain run-leg neuromuscular readiness.
 - The Sep 26 planned 120km long ride (Wk14) sits only 6 days before race week for the Half Oceanman — cap it at 75–80km or 150 minutes maximum to avoid carrying pre-race leg fatigue into the swim taper.
 - Avoid the Wk14 Thursday threshold cycling intervals (5x5min at 210–244W) given that race week begins immediately after — this is high-intensity work too close to the Half Oceanman; replace with a shorter Z2 spin to stay sharp without generating fatigue.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
