Race Targets

Half Oceanman
Oct 03, 2026
In 25 days
Target: 2:05:00
Predicted: ~2:20:09

Treviso 10K Tiramisu Run
Oct 11, 2026
In 33 days
Target: 57:30

Marathon
Feb 07, 2027
In 152 days
Target: 4:02:39

Ironman Italy Cervia
Jun 20, 2027
In 285 days
Target: 11:43:58
Predicted: ~9:54:45

AI Coaching

- Training volume over the last 4 weeks has been very low — only 5 sessions totalling around 6.5 hours — which is well below what's needed for a Half Oceanman 5,000m swim in 26 days. Sleep data is consistently poor (averaging under 6 hours most nights, with several nights under 5 hours) and body battery frequently sits in the 20–50 range, indicating chronic under-recovery that is likely suppressing both training capacity and adaptation. The open-water swim pace of ~28–29 min/km is significantly slower than the 2:30/100m (25:00/km) race target, making swim-specific work the most urgent priority heading into race week.
- Prioritise sleep above all else this week — body battery data shows sustained low readings (frequently 12–46) driven by consistent 3–5 hour nights; even adding 60–90 minutes of sleep per night will improve adaptation from the sessions you do complete.
 - The 5,000m swim race target at 2:30/100m requires sustained open-water pace — your recent OW swims averaged ~28:45/km (~2:53/100m), so this week's pool sessions should include longer continuous aerobic blocks (1,000–1,500m unbroken) at 2:30/100m to close that gap before taper week.
 - Keep the Tuesday tempo run on 8 Sep but cap the continuous effort at 20–25 minutes rather than 30–40 minutes given low body battery (30) and poor recent sleep — quality over duration this close to a race.
 - The Saturday 110km long ride on 12 Sep is well-timed as a final aerobic stimulus before the Half Oceanman taper, but keep watts firmly in Z2 (128–160W) and cut short if fatigue accumulates — arriving rested at the swim start matters more than ride volume.
 - After the Half Oceanman swim on 3 Oct, allow 3–5 days of genuine recovery before resuming structured training — a 5km open-water race is a meaningful effort and the Treviso 10K is only 8 days later, so the post-race week must be light.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-09-08	Running	Tempo run 60 min total: 10 min easy warm-up, 20–25 min continuous at 5:35–5:50/km, 10 min	DECREASE
2026-09-12	Cycling	90–100km @ 128–160W (lower half of Z2 only), cap at 210 min — omit Z3 tempo blocks entirel	DECREASE
2026-09-13	Running	14–15km @ 6:30–6:45/km, cap at 100 min — easy conversational effort, no negative-split pus	DECREASE
2026-09-19	Cycling	45km @ 120–140W, cap at 90 min — purely aerobic spin, stop early if fatigue or HR climbs	DECREASE
2026-09-20	Running	8–10km @ 6:45–7:00/km, cap at 60 min — flat easy effort, HR ≤ 135 bpm throughout	DECREASE
2026-10-04	Running	Easy 30–40 min jog at 7:00+/km, HR ≤ 130 bpm — this is one day after the Half Oceanman swi	REPLACE
