Race Targets

Half Oceanman
Oct 03, 2026
In 56 days
Target: 2:05:00
Predicted: ~2:10:49

Treviso 10K Tiramisu Run
Oct 11, 2026
In 64 days
Target: 57:30
Predicted: ~56:39

Marathon
Feb 07, 2027
In 183 days
Target: 4:02:39
Predicted: ~3:59:04

Ironman Italy Cervia
Jun 20, 2027
In 316 days
Target: 11:43:58
Predicted: ~16:36:14

AI Coaching

The last 4 weeks have been severely disrupted by illness starting around 2 August, with doctor-ordered rest through at least 11 August — body battery readings have been critically low (0–11) across multiple recent days, confirming the athlete is still not recovered. Prior to the illness, training was sparse but included a solid 77km cycling effort on 20 July and reasonable swim volume; however, the high HR run on 18 July (avg 179 bpm) suggests that session was executed at too high an intensity relative to recovery. The immediate priority is a careful, gated return to training from 11 August, protecting the Half Oceanman (56 days away, 5km swim) and Treviso 10K (64 days away) rather than chasing lost fitness.

- On 11 August, treat the return-to-training run as a pure wellness check: keep HR strictly under 135 bpm and shorten to 20–25 minutes if any fatigue or symptoms persist — do not attempt both the run and the swim on the same day if body battery is below 40 on waking.
- Given the Half Oceanman swim target of 5,000m at 2:30/100m in 56 days, prioritise swimming volume over cycling and running in weeks 9–10: aim for at least 3 swim sessions per week totalling 6,000–7,000m once fully recovered, as your open-water pace data shows you averaging around 2:25–2:35/100m which is right on the edge of target.
- Avoid any runs at or above tempo intensity (sub-5:30/km) until at least one full week of easy running has been completed post-illness — the 18 July run at 179 bpm average shows a pattern of going too hard too soon, which likely contributed to reduced resilience heading into the illness period.
- For the week abroad (24–30 August), confirm bike access in advance; if no bike is available, substitute the Saturday long ride with a 75–90 min open-water or pool swim, which directly serves the Half Oceanman build and requires no equipment.
- Sleep is the single biggest lever right now — multiple nights of under 5 hours in the last two weeks will slow immune recovery and block training adaptation; target 7+ hours per night as a non-negotiable gate before resuming any quality sessions.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-08-11	Running	20–25 min easy walk/jog only if body battery on waking is ≥35; if body battery is below 35	DECREASE
2026-08-11	Swimming	Move to 12 August (Wednesday, nominally a rest day) and keep at 1,000m max — only if the T	REPLACE
2026-08-13	Cycling	Reduce to 30 min at 100–130W (perceived easy, cadence 85–90 rpm) and skip if morning body	DECREASE
2026-08-18	Swimming	Extend to 2,200–2,400m and include a 400m continuous time-trial effort at target 2:30/100m	INCREASE
2026-08-22	Cycling	Keep the morning open-water swim (1,500–2,000m at easy effort) as the primary session; red	DECREASE
2026-08-29	Cycling	If travelling abroad with no bike access, replace entirely with a 75–90 min open-water or	REPLACE
