Race Targets

Treviso 10K Tiramisu Run
Oct 03, 2026
In 64 days
Target: 57:30
Predicted: ~1:01:53

Half Oceanman
Oct 03, 2026
In 64 days
Target: 2:05:00
Predicted: ~2:12:20

Marathon
Feb 07, 2027
In 191 days
Target: 4:02:39
Predicted: ~4:21:08

Ironman Italy Cervia
Jun 20, 2027
In 324 days
Target: 11:43:58
Predicted: ~16:59:27

AI Coaching

The last 4 weeks show a highly inconsistent training pattern with very low overall volume — only 9 sessions logged, dominated by short swims and two runs — combined with chronically poor sleep (multiple nights under 5 hours, a 41-minute night on July 27) and persistently low body battery readings. The July 18 run at 179 bpm average HR and the 4.5-hour cycling session on July 20 stand out as significant outliers that likely deepened the fatigue hole the athlete is now in. With both the Treviso 10K and Half Oceanman 64 days away, the priority must be rebuilding sleep and recovery first, then gradually reintroducing structured training before adding any race-specific intensity.

- Prioritise sleep above all else this week — aim for 7+ hours every night before adding any training load, as body battery has been critically low (2 on July 30, 5 on July 27) and no meaningful adaptation can occur in this state.
- For the Treviso 10K (64 days away), introduce 1 x race-pace run per week from Week 8 onwards at 5:45/km — short intervals (4-5 x 1km) are already in the plan for Wk9/10 and should be protected as the key quality session each week.
- For the Half Oceanman 5km swim (64 days away), the twice-weekly pool sessions are appropriate but currently unmet — make the Tuesday pool swim the non-negotiable anchor of each week once recovery permits, building toward a 3.5-4km continuous or broken set by late August.
- Avoid any HR exceedances above 160 bpm in runs until at least mid-August — the July 18 run at 179 bpm average was counterproductive given the fatigue context and risks injury ahead of both September races.
- Cap the long ride at 84km / Z2 lower half until two consecutive weeks of 6.5h+ average sleep are achieved — the July 20 cycling session (282 min) was too long relative to the recovery state and should not be repeated in the current condition.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):
