Race Targets

Half Oceanman
Oct 03, 2026
In 33 days
Target: 2:05:00
Predicted: ~2:18:38

Treviso 10K Tiramisu Run
Oct 11, 2026
In 41 days
Target: 57:30

Marathon
Feb 07, 2027
In 160 days
Target: 4:02:39

Ironman Italy Cervia
Jun 20, 2027
In 293 days
Target: 11:43:58
Predicted: ~8:34:52

AI Coaching

- Training volume over the last 4 weeks has been critically low — only 3 sessions logged (one short open-water swim, one indoor ride, and one longer open-water swim), representing a significant under-training relative to the plan's demands. Sleep is consistently poor, averaging under 6 hours most nights, and body battery readings are frequently very low (below 30), indicating chronic under-recovery. With the Half Oceanman 5km swim just 33 days away, the priority must be re-establishing consistency immediately, particularly in the water, while managing fatigue carefully.
- Your most urgent focus is swim frequency: the Half Oceanman's 5km swim is 33 days away and you've logged only 2km of swimming in 4 weeks — aim for at least 3 swim sessions per week from now through race week to rebuild feel and aerobic capacity in the water.
 - Your sleep is chronically insufficient (many nights under 5.5 hours) and body battery is regularly bottoming out below 20 — treat sleep as a training session and protect 7+ hours nightly; without it, training adaptations won't land and injury risk climbs sharply.
 - With your current low fitness base, treat Wk11 and Wk12 as a genuine re-entry block rather than a continuation of a structured plan — hit every swim and one bike/run per week consistently before worrying about hitting prescribed power and pace targets.
 - Your open-water swim pace on 30 Aug was ~28:47/100m at HR 161, which is very high intensity for that pace — focus on relaxed, efficient technique in pool sessions (bilateral breathing, long catch, controlled effort) to lower your HR at race pace before the Half Oceanman.
 - The Wk13 long run (20.5km on 20 Sept) falls only 14 days before the Half Oceanman and is too much volume at this fitness level — flag this to reduce significantly to 10–12km easy to arrive at the race with fresh legs.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-09-01	Cycling	60 min easy spin at 110–140W (Z1–low Z2 only), no tempo blocks — treat as legs-activation	DECREASE
2026-09-05	Cycling	60–70km @ 120–145W (low Z2 only), cap at 150 min — keep it comfortable and stop if fatigue	DECREASE
2026-09-06	Running	8–10km @ 6:45–7:00/km (pure easy aerobic), cap at 60 min — no pace pressure	DECREASE
2026-09-19	Cycling	60km @ 120–145W, cap at 120 min — prioritise feel over distance with race 15 days away	DECREASE
2026-09-20	Running	10–12km @ 6:45–7:00/km easy, cap at 75 min — protect legs ahead of Half Oceanman swim race	DECREASE
2026-09-18	Swimming	2,500–3,000m total: warm-up drills, one 1,000m continuous block @ 2:30/100m, then 4×200m @	DECREASE
