Race Targets

Half Oceanman
Oct 03, 2026
In 63 days
Target: 2:05:00
Predicted: ~2:12:29

Treviso 10K Tiramisu Run
Oct 11, 2026
In 71 days
Target: 57:30
Predicted: ~1:01:53

Marathon
Feb 07, 2027
In 190 days
Target: 4:02:39
Predicted: ~4:21:08

Ironman Italy Cervia
Jun 20, 2027
In 323 days
Target: 11:43:58
Predicted: ~16:59:34

⚠️ Pre-Race Conflicts

DATE	DISCIPLINE	SESSION	DURATION	CONFLICT
2026-10-09	Swimming	Wk16 Pool Swim (Friday)	60min	2d before Treviso 10K Tiramisu Run
2026-10-10	Cycling	Wk16 Long Ride	240min	1d before Treviso 10K Tiramisu Run

🤖 AI Coaching

The last 4 weeks reveal a heavily fatigued athlete: sleep is chronically short (multiple nights under 5 hours, one night at 41 minutes), body battery has been critically low (2–31 on several recent mornings), and training volume has been sporadic with a dangerous HR spike on July 18 (avg 179 bpm running). The one positive is the July 20 long ride (77km) showing baseline cycling fitness exists, and open-water swims are building toward the Half Oceanman target. Immediate priority must be rebuilding sleep and recovery before any structured training load can be absorbed.

- Enforce a strict body battery gate of ≥45 before any session through at least August 8 — if the gate is not met, full rest only, no 'consolation' walks or easy spins that still add stress.
- Target 7+ hours in bed every night this week regardless of sleep quality achieved — the pattern of 41-minute, 163-minute, and 183-minute nights is clinically significant and will prevent any training adaptation until corrected.
- The Half Oceanman swim (5,000m at 2:30/100m) in 63 days is the priority race: begin rebuilding pool volume systematically from August 4 with technique-focused sessions, targeting 3×/week swimming by August 18 to restore feel after the 4-week open-water-only period.
- The July 18 run at avg 179 bpm (training load 208) was a red-flag session — avoid any running above HR 145 until at least August 9, and gate all runs on morning body battery ≥50 to prevent a repeat.
- For the Treviso 10K (71 days away), begin adding 4–5 × 1km race-pace intervals at 5:45/km in week 9 (August 20 onwards) only after sleep and body battery metrics normalise — the current fitness base supports this pace but only when recovered.

Proposed plan changes (review on the website, apply via "Apply to Dashboard"):

DATE	DISCIPLINE	PROPOSED	TYPE
2026-08-04	Cycling	Full rest or 20-min gentle walk only — do not attempt the cycling session; given body batt	SKIP
2026-08-08	Cycling	45-min flat Z1 spin capped at 128W maximum — only execute if morning body battery is ≥55 A	DECREASE
2026-08-15	Cycling	70–90 min at 128–160W (low Z2), flat route, no distance target — add Z3 tempo blocks only	DECREASE
2026-08-21	Swimming	60 min pool session: 2,500m total — 400m warm-up, 3×600m @ 2:25–2:30/100m with 45-sec rest	REPLACE

2026-10-09	Swimming	Rest day — no swimming 2 days before the Treviso 10K race; at most a 10-min gentle shakeou	REPLACE
2026-10-10	Cycling	Full rest day — absolutely no cycling the day before a 10K race; optional 15-min easy walk	SKIP
